

COMPANY PRESENTATION

INTRODUCTION TO MIGRATION AND UPDATE SERVICES

Services

Implementations

A full cycle of project activities, for example:

- Business process requirements analysis, fit & gap.
 - Customization and development, preparation of test scenarios and user manuals.
 - Importing data from old systems.
- Training for end users.

Additional services:

- Training and educational courses for analysts and developers.
- Full technical support for projects.
- Migration from other ERP systems.
- Outsourcing of skilled ERP consultants and developers
- Audit of your current system, modification and customization if needed.

Clarity BC and NAV Tailored Team

clarity **How We Can Help You**

Upgrades

Upgrades from any NAV version to the latest Business Central (Cloud or On-Prem).

Complex legacy environment

Mixed customizations, multiple localizations, large databases (1TB+).

Conversion

Conversion of C/AL to AL with full refactoring and event-driven architecture.

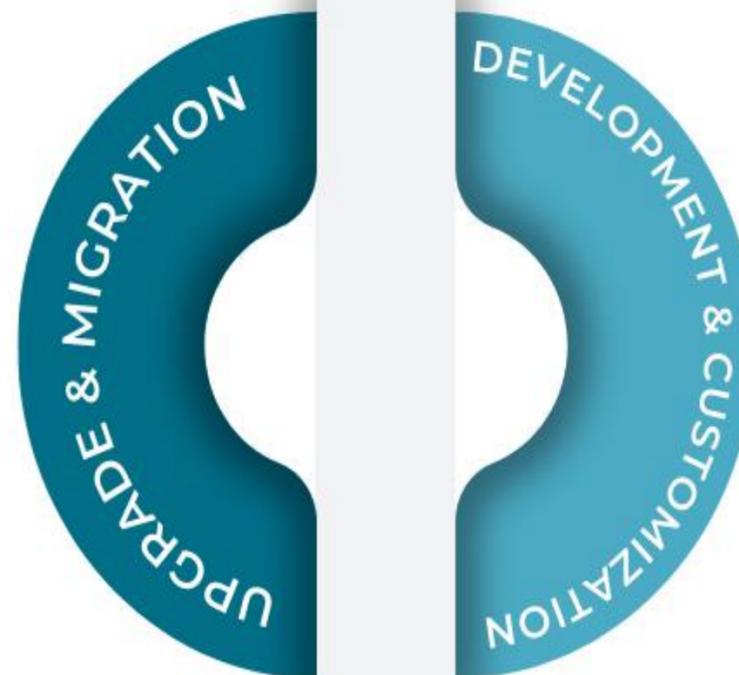

Migrations ISV

Migration of ISV solutions to modern extension-based architecture.

Quality control

Use of automated pipelines, containerized environments, and telemetry for quality control.

Development

Development of AL extensions tailored to Partners and client needs.

Creation

Creation of vertical solutions and reusable components.

Integration

Supports integration via REST (OData), SOAP (legacy), and .NET interop (on-premises).

Performance

Optimizing performance and diagnosing issues using built-in telemetry and profiling tools.

Power Platform

Enablement of Power Platform scenarios (Power Automate, Power Apps).

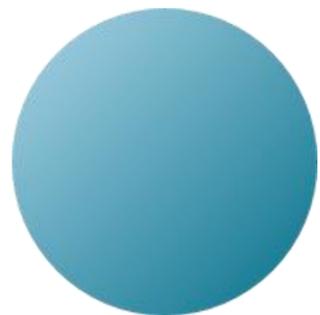

Support and Integration Expertise

Partner-focused support

- SLA-based support for Partner and ISV solutions.
- Lifecycle management of extensions and environments.
- Continuous upgrade strategy: “Get Current, Stay Current”.
- Support for multi-tenant and multi-localization deployments.

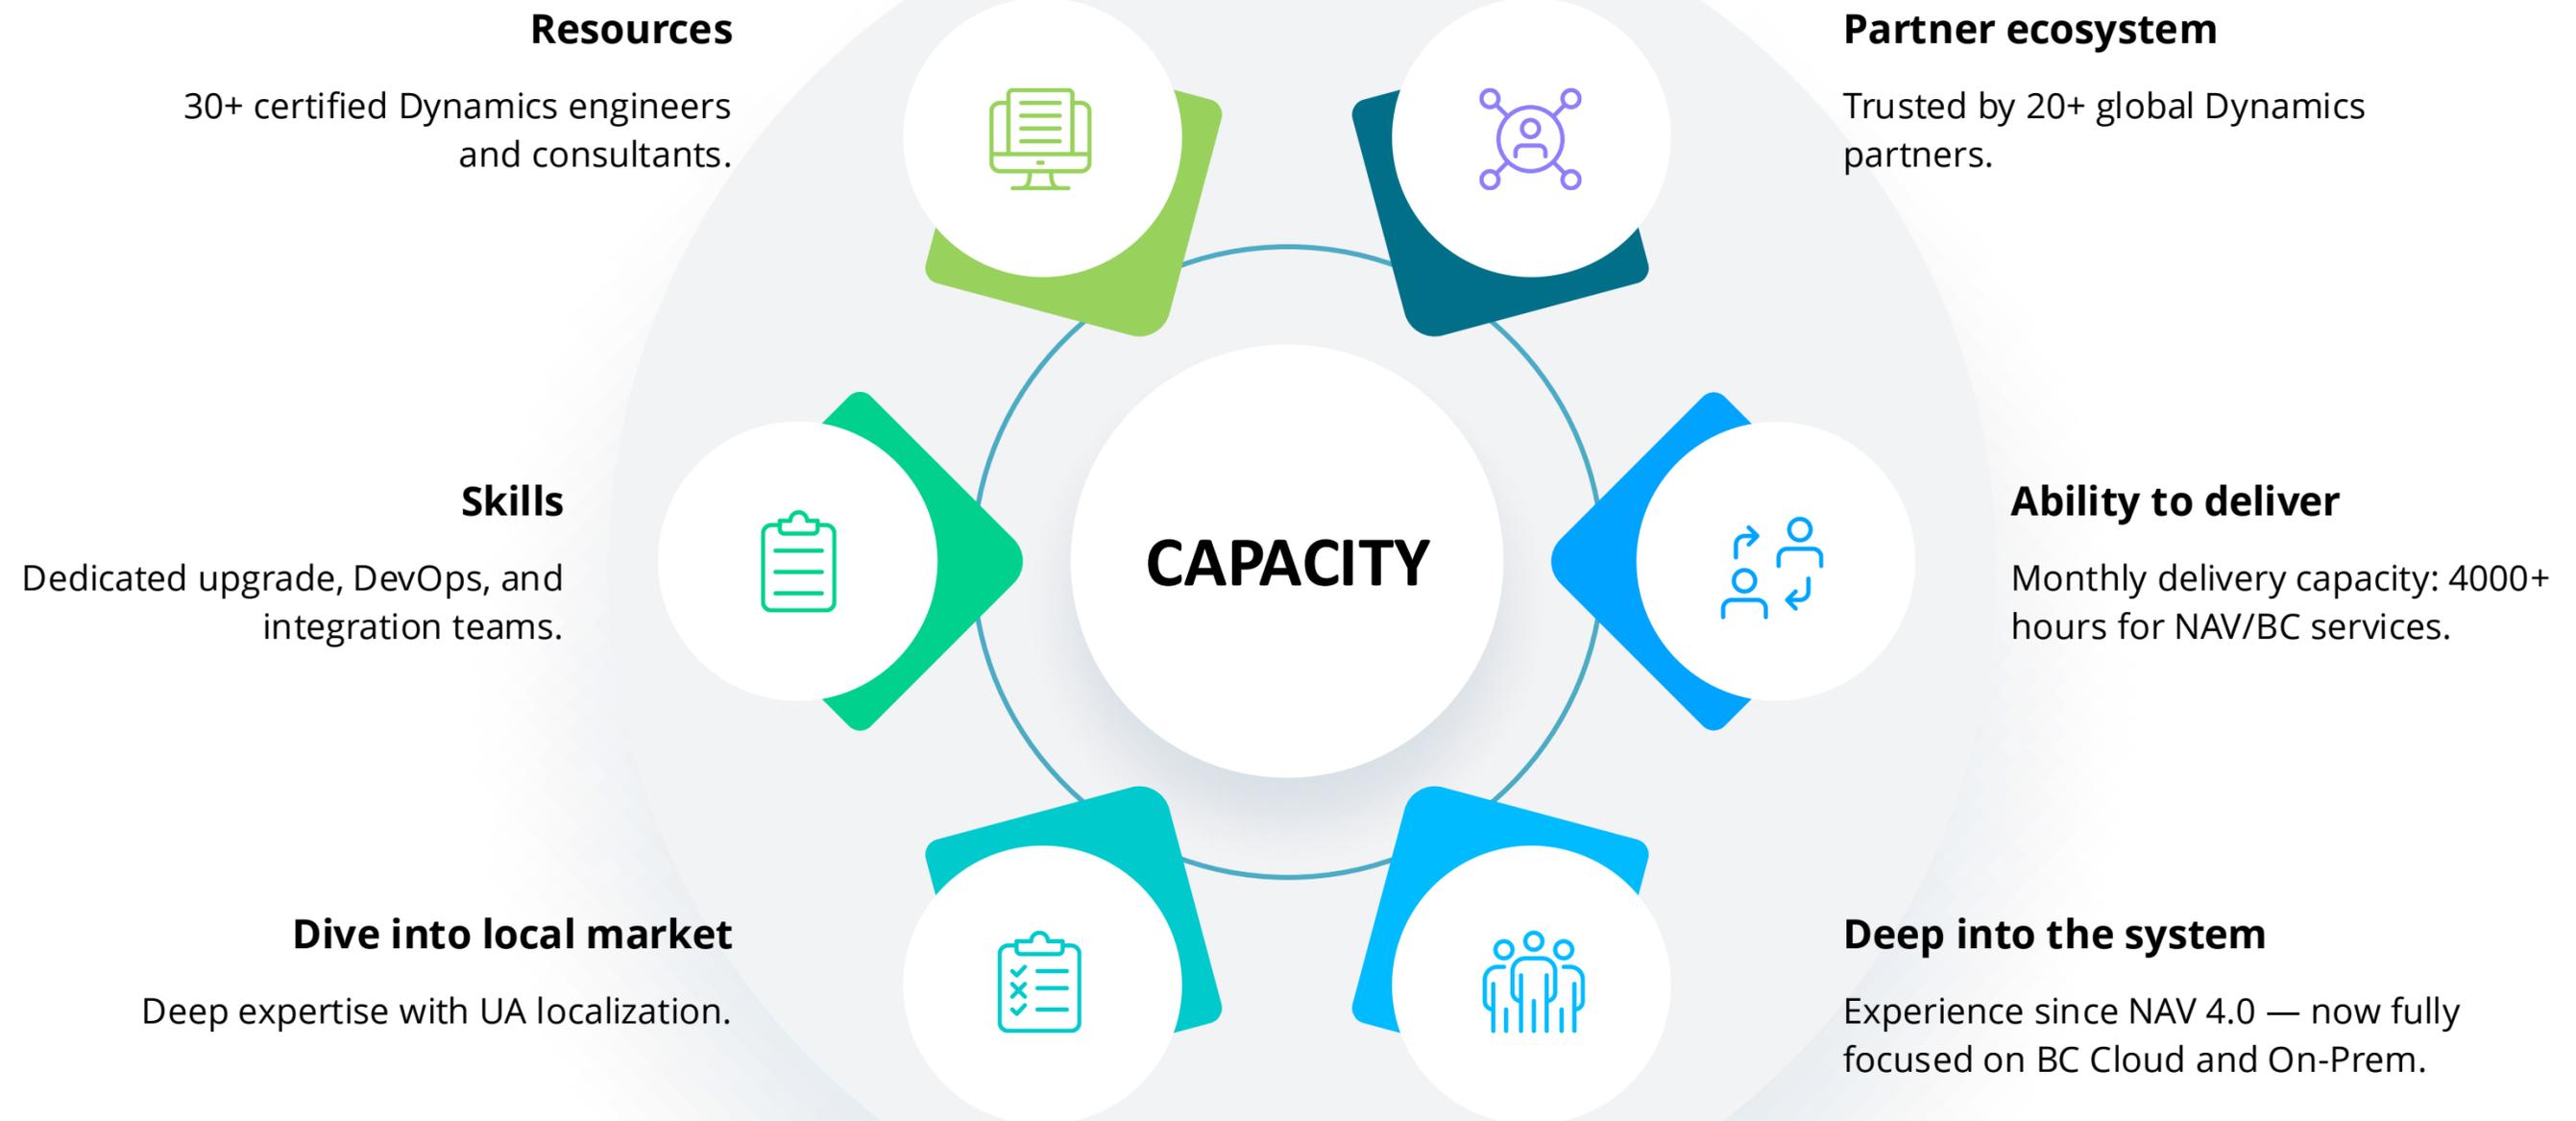

Integration Services

- CRM Integration: seamless connectivity with Dynamics 365 Sales, Customer Insights, and other CRM platforms.
- Power Platform Enablement: integration with Power Automate, Power Apps, and Power BI for extended workflows, mobile apps, and analytics.
- E-commerce integrations (Shopify, Amazon, eBay, etc.).
- Banking integrations (automated bank feeds, statement imports).
- Logistics and warehouse system integrations (RFID).
- Legacy system bridges (FTP, XML, JSON, SQL procedures).

Clarity Team's Capacity and Reach

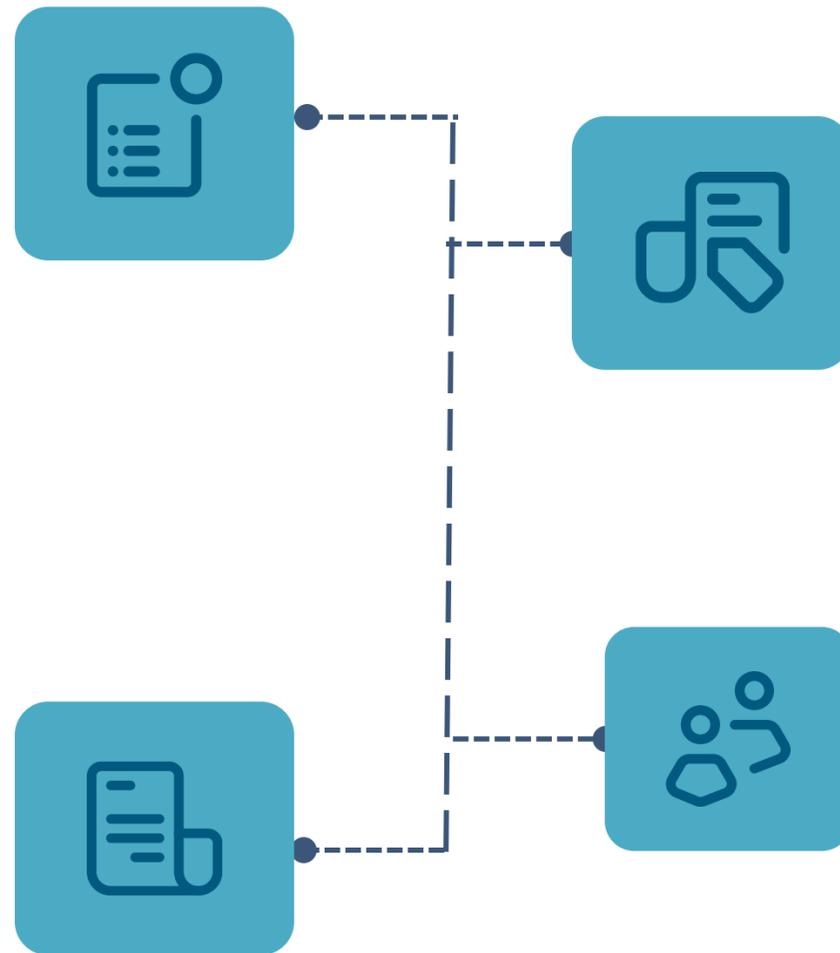

Clarity Technology Stack and Practices

Engineering Practices

- AL-first development with Git-based workflows and CI/CD pipelines.
- Automated testing, telemetry monitoring, and performance profiling.
- SQL optimization and custom reporting.
- NET interop for advanced scenarios (for on-prem)
- API-first approach for scalable integrations (OData v4, custom APIs, web services).

Innovation-Ready Approach

The Clarity team aligns closely with Microsoft's strategic roadmap, embracing Copilot integration, AI-powered business insights, and modernized user experiences across the Dynamics 365 ecosystem.

Specialized Solutions

- Multi-tenant setups with localized environments.
- Rewriting legacy logic into AL-compatible modules.
- Advanced XML/JSON export customization.
- Data Exchange Framework for banking and financial integrations.

Full support

While adoption is still evolving, we're ready to support partners as these technologies become production-ready.

Clarity Our cases

Data Migration of 7 TB

We successfully migrated a 7TB database with zero errors after careful preparation. It was on-premise architecture.

Implementation of RFID

We configured onprem data gateway and connect NAV to cloud services and external systems. Developed solution in NAV2018 to process RFID data. Automated warehouse activities such as picks, putaways, and inventory movements using RFID events.

FTP rewrite

Architected the solution using .NET for FTP operations and AL for ERP integration. Built .NET libraries for FTP, exposed them as web services or .NET interop, and called them from AL.

100+ API for one BC

We have successfully set up over 100 APIs for each BC tenant. We automated the build, test, and deployment processes to manage the scale effectively. Tests were implemented for each API endpoint, and we used built-in telemetry to monitor API usage and performance.

Upgrade NAV 2.5 to BC ver. 26

A successful upgrade was completed for NAV2.5 DE localization. We conducted a detailed analysis, replaced several custom functionalities with new standards from BC, and ensured that all historical transactions were retained for the client, which was their primary request.
